APPLICATION PERFORMANCE

MERCURY™
BUSINESS TECHNOLOGY OPTIMIZATION

MERCURY

PERFORMANCE CENTER

As enterprise applications continue to grow more complex, the risk of performance failure accelerates every day. Application breaches can have a material impact on your business—especially if a problem occurs during peak periods.

Leading IT professionals rely on Mercury BTO Enterprise™ to ensure their critical applications are ready to deliver intended business outcomes before going live. Mercury BTO Enterprise is the industry's first software and services suite that reduces the risk, cost, and time to business outcomes of IT.

Mercury BTO Enterprise impacts:

- Application failure risk.
- Risks and costs of delivering business results with custom and packaged applications.
- The business value delivered from your portfolio of IT initiatives.
- Effective change control and configuration management.

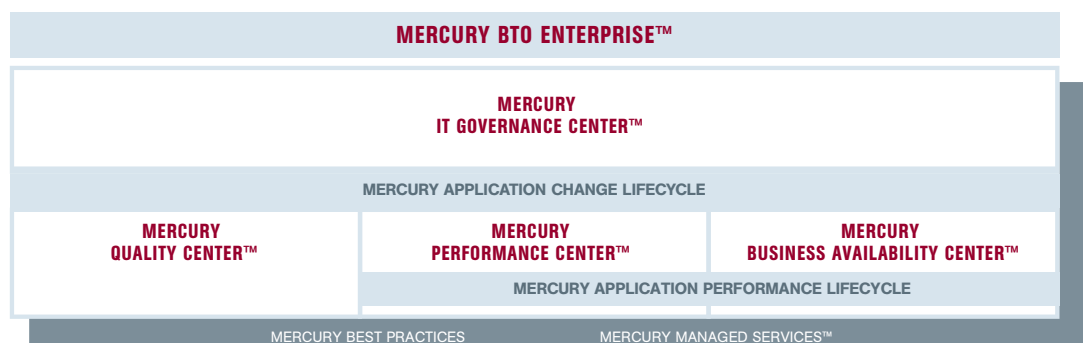

MERCURY PERFORMANCE CENTER

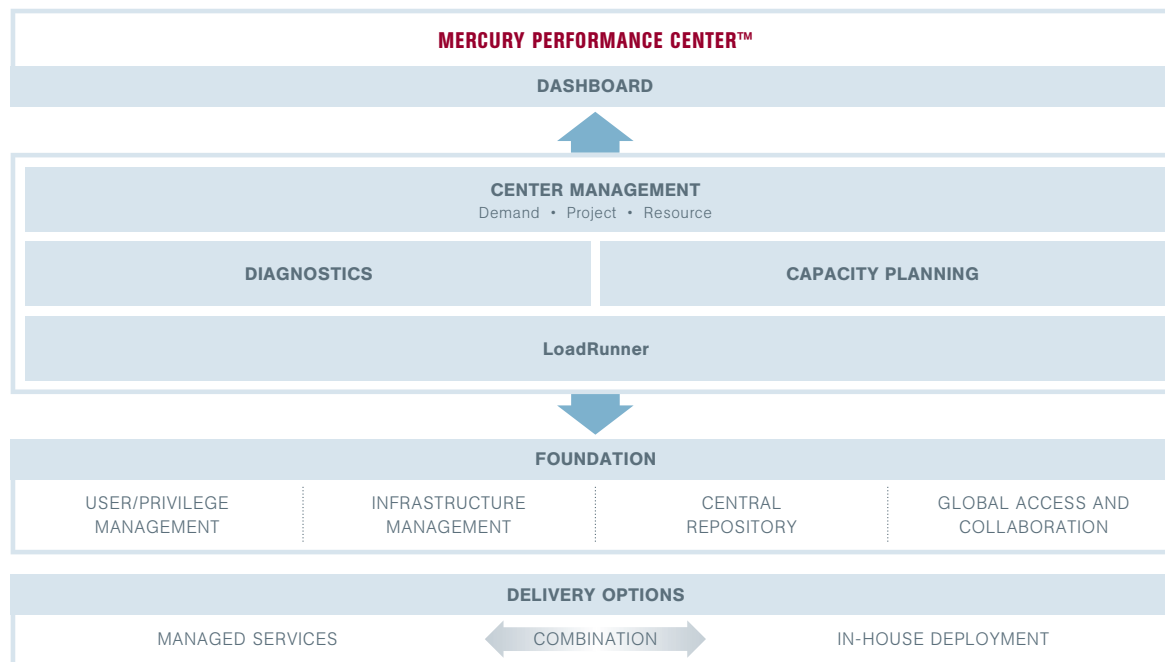

A strategic part of Mercury BTO Enterprise, Mercury Performance Center™ provides the first lifecycle approach to optimizing application performance, and is the only solution that scales from project-based performance testing to a 24x7 centralized Performance Testing Center of Excellence. It provides a web-based, on-demand optimization solution for your performance testing and management process, integrating load-testing, diagnostics, and capacity-planning applications.

Mercury Performance Center delivers a globally accessible and shareable pool of load-testing resources. This enables you to run tests around-the-clock and coordinate geographically diverse testing teams, while minimizing the total cost of performance testing in the enterprise.

With Mercury Performance Center, you can:

- Provide project-level visibility and a collaborative web-based working environment to all team members, whether in-house or offshore.
- Enable complete visibility into performance shortfalls as well as root cause analysis of performance bottlenecks.
- Lower the cost of distributed load testing by utilizing a single hardware and software infrastructure for all performance testing needs.

MERCURY PERFORMANCE CENTER OFFERINGS

Mercury Performance Center includes integrated applications and a business dashboard for key performance optimization activities across complex, heterogeneous computing environments:

Mercury Center Management for Performance Center™ enables you to run a performance testing center like a business. Built on Mercury's IT governance platform, it delivers an out-of-the-box demand, project, and resource-management solution for deploying an end-to-end Performance Testing Center of Excellence.

Mercury LoadRunner® offers an enterprise-class solution for predicting system behavior and performance, and the only integrated load-testing, tuning, and diagnostics solution in the market today.

Mercury Diagnostics™ reduces the time and effort necessary to pinpoint and resolve performance problems in J2EE, .NET, ERP/CRM, SOA, and web environments, ensuring high application availability.

Mercury Capacity Planning™ (Powered by HyPerformix™) provides simulation modeling of real-world production environments to optimize the cost-to-risk ratio in IT investment decisions. It helps forecast and plan the types and quantities of key IT resources required to meet cost, performance, and utilization objectives.

Mercury Performance Center Services provides a wide range of services to lead and support you through your implementation, including Mercury Managed Services for Performance Center™, Mercury Custom Consulting Service™, and Mercury Performance Lifecycle Service™.

WHY MERCURY

Mercury is the world leader in application delivery, with 58.8-percent market share in automated software quality and performance testing products. Only Mercury Performance Center provides the necessary visibility and data to measure application readiness. Our approach enables you to manage the risk of deploying mission-critical applications by telling you exactly what to expect once your application is in production. You can verify that applications will perform and scale to meet business requirements – and help mitigate the business risk of application failure.

“

Mercury is poised with both products and professional services that can assist those who would like to adopt an application performance lifecycle management approach. This approach makes a lot of sense for customers because each stage of the lifecycle benefits from the integration of processes and the sharing of data between the groups responsible for managing application performance throughout its lifecycle.
